Workspaces API Network Search Postman

Overview Getting started New Environment GET Get data POST Post data PUT Update data [CONFLICT] GET Delete data

API basics: CRUD, test & variable / Delete data

http://127.0.0.1:8000/books

Params Authorization Headers (6) Body Scripts Settings

Normal text This is a DELETE request, and it is used to delete data that was previously created via a POST request. You typically identify the entity being updated by including an identifier in the URL (eg. {id=1}).

A successful DELETE request typically returns a 200 OK, 202 Accepted, or 204 No Content response code.

200 OK 241 ms 692 B Save R

Params Authorization Headers (6) Body Scripts Settings

This is a DELETE request, and it is used to delete data that was previously created via a POST request. You typically identify the entity being updated by including an identifier in the URL (eg. {id}=1).

A successful DELETE request typically returns a 200 OK, 202 Accepted, or 204 No Content response code.

200 OK 20 ms 163 B Save

```

The screenshot shows the VS Code editor with the file `publishers.py` open. The code defines a FastAPI application that connects to a MySQL database and has a `patch_publisher` endpoint. The terminal at the bottom shows the command `uvicorn prgm6:app --reload` being executed, and the server is running on `http://127.0.0.1:8000`. The output shows two successful GET requests to the `/publishers_patch` endpoint.

The screenshot shows the VS Code editor with the file `reservations.py` open. The code defines a FastAPI application that connects to a MySQL database and has a `get_reservations` endpoint. The terminal at the bottom shows the command `uvicorn prgm7:app --reload` being executed, and the server is running on `http://127.0.0.1:8000`. The output shows a successful GET request to the `/reservations` endpoint.

Workspaces API Network Search Postman Ctrl K Run Settings Upgrade

view Getting started New Environment GET Get data POST Post data PUT Update data [CONFLICT] GET Delete data + Save

API basics: CRUD, test & variable Delete data Save

URL: http://127.0.0.1:8000/reservations

Params Authorization Headers (6) Body Scripts Settings

This is a DELETE request, and it is used to delete data that was previously created via a POST request. You typically identify the entity being updated by including an identifier in the URL (eg. {id}=1).

A successful DELETE request typically returns a 200 OK, 202 Accepted, or 204 No Content response code.

200 OK 38 ms 623 B Run Save

Workspaces API Network Search Postman Ctrl K Run Settings Upgrade

view Getting started New Environment GET Get data POST Post data PUT Update data [CONFLICT] GET Delete data Save

API basics: CRUD, test & variable Delete data Save

URL:

Params Authorization Headers (6) Body Scripts Settings

This is a DELETE request, and it is used to delete data that was previously created via a POST request. You typically identify the entity being updated by including an identifier in the URL (eg. {id}=1).

A successful DELETE request typically returns a 200 OK, 202 Accepted, or 204 No Content response code.

200 OK - 196 ms - 527 B Save

Workspaces API Network Search Postman Ctrl X Run Settings Upgrade

view Getting started New Environment GET Get data POST Post data PUT Update data [CONFLICT] DELETE delete + Save

API basics: CRUD, test & variable Delete data Save

URL:

Params Authorization Headers (6) Body Scripts Settings

This is a DELETE request, and it is used to delete data that was previously created via a POST request. You typically identify the entity being updated by including an identifier in the URL (eg. {id}=1).

A successful DELETE request typically returns a 200 OK, 202 Accepted, or 204 No Content response code.

200 OK 46 ms 636 B Save

Preview Visualize

```
{
  "user_id": 1,
  "name": "Rahul Kumar",
